Thailand cybersecurity at the enforcement turn

Mandatory data-protection penalties and a structural skills gap are converting compliance anxiety into managed-service spend. PDPA enforcement and the MSSP pivot define the 2027 opportunity.

2027–2032

How we built this analysis

This report triangulates regulatory disclosures, national incident statistics, industry market sizing, and operator positioning into a forward read on Thailand's cybersecurity market. Every quantitative claim carries an inline source tag; **[Kira estimates]** marks figures derived from our own synthesis.

PRIMARY INPUTS

→ Regulatory & enforcement data

Personal Data Protection Committee administrative-penalty announcements, the Cybersecurity Act framework, and national cyber-agency incident reporting.

→ Threat & workforce reads

Weekly attack-volume telemetry, breach-incidence surveys, and published estimates of Thailand's cybersecurity talent shortfall.

→ Analyst triangulation

Where published market figures diverge, our team reconciles to the most defensible mid-point and tags it as a KIRA estimate.

SCOPE & LIMITS

→ Unit of analysis

The Thai domestic cybersecurity market — products and services — viewed through the regulatory-enforcement and managed-services lens. Consumer antivirus retail sits outside scope.

→ Currency & conversion

Market sizing reported in USD as filed; Thai baht (THB) figures for fines and losses are reported as announced. USD conversions use a working rate of THB 34.5 per USD and are directional only.

→ Forecast convention

Forward figures are directional scenarios anchored to documented base years, not point predictions. Ranges signal genuine uncertainty.

Thailand's cybersecurity market — a compliance re-rating

A **USD 440 mn spend pool** meets a threat environment running far hotter than the global average and a regulator that has stopped waiting. Headline growth is high single-digit, but the demand mix is shifting decisively toward managed detection, compliance services, and cloud security. **The next 24 months decide** which providers own the regulated buyer.

PDPC

The market state

Thailand's cybersecurity market was worth roughly **USD 440 mn in 2024** and is on a high-single-digit path toward USD 573 mn by 2029 [VMR 2025] [Statista 2025]. Network security still holds the largest share at **61% of spend** [GVR 2024], but the growth is concentrated in cloud security and managed services as enterprises outsource defence they cannot staff.

Why now: enforcement as demand engine

The Personal Data Protection Committee issued its first administrative penalty — the maximum **THB 7 mn** — in August 2024, then layered on THB 14.5 mn across five further cases in August 2025 [PDPC 2025]. With organisations facing **3,180 attacks a week** — 70% above the global norm [Check Point 2025] — compliance fear has become a budget line.

SOURCE KEY · VMR 2025 = Verified Market Research Thailand cybersecurity market 2025 · Statista 2025 = Statista Thailand cybersecurity market forecast 2025 · GVR 2024 = Grand View Research Thailand cybersecurity segment shares 2024 · Check Point 2025 = Check Point regional attack-volume telemetry Aug 2024–Jan 2025 · NCSA 2024 = National Cyber Security Agency workforce-gap statement 2024 · PDPC 2025 = Personal Data Protection Committee administrative-penalty announcements 2024–2025 · Kira estimates = KIRA in-house analyst triangulation

Five strategic implications for market participants

Five forces reshape competitive dynamics through 2032. Each is anchored to documented market data and our synthesis of Thailand's regulatory and threat trajectory.

01 • COMPLIANCE

Enforcement converts fear into recurring spend

With PDPA penalties now real — **THB 21 mn imposed since August 2024** [PDPC 2025] — boards treat data protection as a budget line, not a policy memo. Providers that bundle compliance automation with monitoring capture the durable, renewable revenue.

Anchor: **THB 7 mn** maximum single fine

02 • MANAGED

The MSSP model is the growth pool

Managed security services lead the market as firms outsource defence they cannot staff. SMEs grow fastest at a **~16% CAGR** [GVR 2024], skewing toward managed detection and subscription bundles. Selling product alone leaves the recurring margin on the table.

Anchor: **~16%** SME segment CAGR

03 • TALENT

The skills gap is structural, not cyclical

Thailand lacks **20,000+ cybersecurity professionals** [NCSA 2024], and a national plan to train 10,000 by 2026 only partly closes it. Scarcity entrenches the outsourcing logic and rewards providers that operate shared SOCs efficiently.

Anchor: **10k** target trained by 2026

04 • CLOUD

Cloud security outpaces the perimeter

Network security still leads at **61% of spend**, but cloud security grows fastest at a mid-teens CAGR as fintech, e-commerce, and government cloud scale [GVR 2024]. Budgets pivot from boxes to identity, posture, and workload protection.

Anchor: cloud security **~16%** CAGR

05 • AI

AI arms both attacker and defender

AI-driven phishing and deepfake fraud are rampant, while AI detection becomes table stakes [Nation 2025]. An anti-scam decree already prevented **~THB 6 bn** in losses in three months [Nation 2025]. Defenders who automate triage win the loss-ratio battle.

Anchor: **~THB 6 bn** scam losses averted

SOURCE KEY • GVR 2024 = Grand View Research Thailand cybersecurity segment & SME analysis 2024 • NCSA 2024 = National Cyber Security Agency workforce-gap statement 2024 • Nation 2025 = The Nation Thailand AI-threat & anti-scam-decree reporting 2025 • PDPC 2025 = Personal Data Protection Committee administrative-penalty announcements 2024–2025

SECTION 06

The threat landscape

Thai organisations absorb roughly **3,180 attacks a week** — 70% above the global average — dominated by phishing and banking scams. This is not a backdrop to the cybersecurity story. It **is** the demand engine.

[6.1 ATTACK VOLUME](#)[6.2 PHISHING & SCAMS](#)[6.3 RANSOMWARE](#)[6.4 COST OF BREACH](#)

An attack surface running hotter than the world average

Thailand's national cyber-response team logged **1,800+ incidents in 2024**, and more than 1,000 in the first five months of 2025 alone [NCSA 2025]. Each incident converts a latent compliance risk into a documented one — and a documented risk is a budget request.

Volume far above the norm

Over the six months to January 2025, Thai organisations faced an average of **3,180 attacks per week**, against a global average of 1,843 [Check Point 2025]. Attacks here run roughly 70% hotter than the world, concentrated in phishing and financial fraud.

Phishing, scams, and AI

Banking scams and phishing dominate the volume, and criminals increasingly use AI — deepfake voices, generated content — to scale impersonation and bypass bank controls [Nation 2025]. More than **63% of organisations** reported a breach, and 52% admitted paying a ransom [Bangkok Post 2025].

The breach cost

In one survey, 68% of Thai firms suffered a significant incident in twelve months, and 34% lost more than **THB 3 mn** each [Fortinet 2024]. Loss frequency, not just severity, is what moves the buying decision.

From grace period to fines: the compliance demand engine

Thailand's Personal Data Protection Act took full effect in 2022 but sat in an awareness phase until 2024. The regulator's pivot to **real administrative penalties** is the single clearest catalyst converting cybersecurity from a discretionary cost into a defensible investment.

The enforcement turn

The PDPC's first penalty — the maximum **THB 7 mn** on a major e-commerce platform that ran without a data-protection officer — landed in August 2024 [PDPC 2024]. A year later, eight fines across five cases added **THB 14.5 mn** [PDPC 2025].

First penalty (Aug 2024)	THB 7.0 mn
Aug 2025 round	THB 14.5 mn
Cumulative to date	> THB 21 mn
Max per offence	THB 5 mn

WHO GOT FINED, AND WHY

The 2025 round reached both sectors: a government agency and its system developer were each fined for a leak of **200,000+ citizens' records**; a hospital paid THB 1.21 mn over leaked patient files; a cosmetics company THB 2.5 mn; and a retailer's data processor THB 3 mn [PDPC 2025]. The common thread is missing security measures and poor processor oversight — exactly what managed monitoring and governance services address.

THE COMMERCIAL READ

Before 2024, PDPA compliance competed with every other discretionary project. After two enforcement rounds — and a regulator that proactively flagged **5,273 potential leak cases** in a single quarter [PDPC 2024] — it competes with nothing: it is mandatory. Vendors that pair compliance automation, DPO-as-a-service, and continuous monitoring convert that mandate into renewable contracts rather than one-off audits.

SOURCE KEY • PDPC 2024 = Personal Data Protection Committee first administrative penalty & proactive-investigation disclosure 2024 • PDPC 2025 = Personal Data Protection Committee August 2025 penalty round (five cases, eight fines) • Kira estimates = KIRA in-house analyst triangulation

Spend by segment: managed services and cloud lead the mix

Network security still dominates the installed base, but the growth is concentrated in cloud security and managed services. **Perimeter spend is mature**; the demographic of demand — regulated, under-staffed, cloud-migrating buyers — pulls the market toward subscription and outsourced models into 2027.

Solutions lead, services grow faster

Solutions held about **61% of 2024 spend** [GVR 2024], reflecting the installed base of firewalls and endpoint controls. But services — managed detection, consulting, compliance — grow faster as the skills gap forces outsourcing, and cloud-delivered deployments now capture the majority of new buying.

Cloud and SMEs are the engine

Cloud security grows fastest at a **mid-teens CAGR**, propelled by government-cloud rollouts and fintech adoption [GVR 2024]. Large enterprises still account for ~65% of revenue, but SMEs — pushed by PDPA fines and supply-chain mandates — post a **~16% CAGR**, the pivotal incremental engine [GVR 2024].

The headline frame

The total market is about **USD 440 mn in 2024**, on track for roughly USD 573 mn by 2029 at a ~9.3% CAGR [VMR 2025] [Statista 2025]; longer-horizon reads see it approaching USD 900 mn by 2032.

SECTION 10

Competitive structure

Thai cybersecurity is a two-layer market. Global product vendors — **Fortinet, Palo Alto, Trend Micro, Cisco** — supply the technology, while local telcos and specialists deliver the managed services and Thai-language compliance the regulation demands.

10.1 TWO-LAYER MARKET

10.2 LOCAL MSSPS

10.3 LEADER PROFILE

10.4 DISTRIBUTION

Market structure: global product layer, local service layer

No single firm dominates Thai cybersecurity end-to-end. Global vendors anchor the product stack; **local telco-backed MSSPs** win the managed-services and compliance work, where Thai-language support and regulatory familiarity are decisive. The demographic of demand rewards integrators that bridge both layers.

Two layers, one buyer

Global vendors supply the firewalls, EDR, and threat intelligence; **telco-backed MSSPs** wrap them in 24/7 SOC operations, PDPA compliance, and Thai-language support [Ken 2025].

MARKET POSITION

As the cybersecurity unit of one of Thailand's largest telecom groups, True Digital Security operates as a leading **managed-security and SOC provider** to enterprise and government buyers [Ken 2025]. Its position rests on telco-scale infrastructure, deep enterprise relationships, and the ability to bundle connectivity, cloud, and security on one contract.

WHY IT WINS THE REGULATED BUYER

The provider pairs 24/7 monitoring with PDPA and Cybersecurity-Act compliance services in Thai — exactly the combination the enforcement turn rewards. As fines make compliance mandatory and the **20,000+ talent gap** [NCSA 2024] forces outsourcing, a one-invoice managed model captures recurring revenue product vendors cannot.

STRATEGIC POSTURE

Telco backing supports the capital and scale needed to run shared SOC's efficiently and to invest in AI-assisted detection. The provider is positioned to extend down-market into the fast-growing SME segment via subscription bundles, while defending enterprise accounts against both global integrators and rival telco AIS.

STRENGTHS & WATCHLIST

- **Telco scale:** infrastructure and balance sheet for shared SOC economics
- **Compliance bundling:** PDPA + monitoring in one Thai-language contract
- **Enterprise base:** incumbent relationships across regulated sectors
- **Watch:** AIS cloud-security momentum; specialist MDR challengers

SOURCE KEY · Ken 2025 = Ken Research Thailand MSSP & SOC market overview 2025 · NCSA 2024 = National Cyber Security Agency workforce-gap statement 2024 · Kira estimates = KIRA in-house analyst positioning

SECTION 11

Regulation & the managed-services pivot

Three instruments — the **PDPA**, the **Cybersecurity Act**, and the **2025 anti-scam decree** — now compel action rather than encourage it. Mandatory reporting, breach penalties, and incident-response duties push buyers from one-off products toward continuous managed defence.

[11.1 PDPA](#)[11.2 CYBERSECURITY ACT](#)[11.3 ANTI-SCAM DECREE](#)[11.4 WINNERS & LOSERS](#)

A regime tuned for accountability, not just adoption

Thailand's regulatory stack — the PDPA, the Cybersecurity Act B.E. 2562, and the 2025 anti-scam Royal Decree — is explicitly about **enforceable obligations** as digital risk steepens. Organisations that align governance, monitoring, and reporting early will absorb the next cycle better than those that resist.

PDPA: THE DEMAND-SIDE CATALYST

With penalties up to **THB 5 mn per offence** plus criminal exposure, and over THB 21 mn imposed since August 2024 [PDPC 2025], the PDPA makes data governance, breach notification, and security controls non-negotiable. It is the clearest driver of compliance-led cybersecurity spend.

CYBERSECURITY ACT & THE NCSA

The Cybersecurity Act B.E. 2562 (2019) empowers the National Cyber Security Agency to set policy and mandate incident reporting, especially for **critical information infrastructure** [NCSA 2024]. Reporting duties and penalties push regulated operators toward continuous monitoring.

WHAT IT MEANS FOR PARTICIPANTS

The accountability turn favours **scale, continuous monitoring, and Thai-language compliance depth**. The 2025 anti-scam Royal Decree — which helped prevent ~THB 6 bn in losses and froze ~182,000 accounts in three months [Nation 2025] — shows the state will mandate active defence, not just disclosure.

- **Winners:** MSSPs that bundle compliance, monitoring, and reporting
- **Pressured:** product-only resellers without a services wrap
- **Pivotal:** partners that explain obligations in Thai to SME boards
- **Emerging:** cyber-insurance and breach-response packaged with cover

SOURCE KEY • PDPC 2025 = Personal Data Protection Committee penalty announcements & framework 2024–2025 • NCSA 2024 = National Cyber Security Agency / Cybersecurity Act B.E. 2562 reporting duties • Nation 2025 = The Nation Thailand anti-scam Royal Decree outcomes 2025

AI moves from pilot to detection core — as talent stays scarce

AI now sits on both sides of the Thai cyber-conflict: criminals scale phishing and deepfake fraud, while defenders automate triage and detection [Nation 2025]. With a **20,000+ professional shortfall** [NCSA 2024], AI-augmented managed services are the only way most Thai organisations can staff a credible defence.

AI on the attack side

Cybercriminals exploit AI models to scale impersonation, financial theft, and bank-control evasion; AI-generated phishing and deepfake voices are now rampant [Nation 2025]. The volume and sophistication outrun manual defence, especially for under-staffed SMEs.

AI on the defence side

Thai banks and MSSPs deploy AI for fraud detection, anomaly spotting, and faster blocking of malicious sites, backed by new law [Nation 2025]. By 2026 AI-assisted detection is **baseline capability**, not a differentiator — the question is who operationalises it at scale.

The skills-gap multiplier

With the talent gap structural, AI is less a cost-cutter than a **force multiplier** for scarce analysts. Providers that pair automation with a shared SOC stretch limited human expertise across many clients — the economic core of the MSSP model.

Six applications reshaping Thai cyber-providers

Translation into operating practice will separate 2027 winners from laggards. These use cases span **compliance** through **active defence**, each observable in Thailand or its closest regional benchmarks today.

01 · COMPLIANCE

PDPA compliance automation

Tooling that maps data flows, manages consent, and generates breach-notification records turns the **THB 21 mn** enforcement reality [PDPC 2025] into a renewable subscription rather than a one-off audit.

ANCHOR: > THB 21 MN FINES TO DATE

02 · DETECTION

Managed detection & response

24/7 SOC-as-a-service triages alerts and contains incidents for buyers who cannot staff their own team. The fastest-growing delivery model, riding the SME **~16% CAGR** [GVR 2024].

STATUS: LEADING SERVICE SEGMENT

03 · FRAUD

AI fraud & scam detection

Models flag anomalous transactions and scam patterns for banks, supporting the anti-scam decree that prevented **~THB 6 bn** in losses in three months [Nation 2025]. A direct loss-prevention lever.

ANCHOR: ~THB 6 BN LOSSES AVERTED

04 · CLOUD

Cloud security posture

CSPM and workload protection follow fintech, e-commerce, and government-cloud migration — the **fastest-growing segment** at a mid-teens CAGR as the perimeter dissolves [GVR 2024].

OBSERVABLE: G-CLOUD, FINTECH

05 · IDENTITY

Zero-trust & identity

Identity-centric controls and zero-trust blueprints replace flat perimeters, favoured by large enterprises with mature stacks [GVR 2024]. Foundational as remote work and SaaS expand the attack surface.

TIE-IN: LARGE-ENTERPRISE STACKS

06 · RESILIENCE

Incident response & cyber-insurance

Packaged breach-response retainers and cyber-insurance assessment — backed by an NCSA fraud-insurance framework — bundle recovery and risk transfer for buyers facing mandatory reporting [NCSA 2024].

STAGE: EMERGING, HIGH VALUE

SOURCE KEY · GVR 2024 = Grand View Research Thailand cybersecurity segment analysis 2024 · NCSA 2024 = National Cyber Security Agency cyber-fraud-insurance framework 2024 · Nation 2025 = The Nation Thailand anti-scam decree outcomes 2025 · PDPC 2025 = Personal Data Protection Committee penalty announcements 2024–2025

Outlook to 2032: steady headline, decisive mix shift

We expect Thai cybersecurity spend to compound in the **high single digits**, with enforcement and the skills gap driving above-trend expansion in managed services, cloud security, and compliance. The providers that win are those that reposition from product resale toward recurring managed defence now.

Base case

Market spend compounds around **9% to 2029**, reaching ~USD 573 mn [Statista 2025] [VMR 2025], with managed services and cloud security outpacing the market as enforcement and the talent gap persist. By 2032 the market approaches ~USD 700 mn on the same trajectory [Kira estimates].

Upside & downside

Upside: harder PDPA enforcement, mandatory critical-infrastructure reporting, and SME compliance uptake. Downside: a budget squeeze deferring discretionary upgrades, or a talent-training surge that slows the outsourcing tailwind near term.

The strategic imperative

Enforcement and scarcity are the most reliable variables in this market. **Reposition toward recurring managed defence** — compliance, MDR, cloud posture — and invest in AI-augmented shared SOCs. Product-only resellers face the steepest adjustment.
