

Malaysia construction at a data-centre inflection

The data-centre build-out and the Johor-Singapore Special Economic Zone are re-pricing a MYR 70 billion market — where the next cycle of demand, margin and risk sits.

COUNTRY	SECTOR	PUBLISHED	REPORT ID
Malaysia	Construction	May 2026	KR-MYS-CONS-2026-001

How we built this view

This view is built from two evidence streams: **primary inputs** — contractor channel checks, project-pipeline tracking, and analyst synthesis — and **secondary anchors** — statistical authorities, listed-contractor filings, and triangulated estimates. Every quantitative claim carries an explicit source tag.

PRIMARY INPUTS

→ Pipeline & tender tracking

Project-by-project tracking of awarded and tendered data-centre, SEZ and transport contracts — surfaces real order books, real award timing, real workloads.

→ Analyst synthesis

KIRA in-house triangulation across multiple disclosed inputs. Tagged inline as [Kira estimates].

→ Operator & specialist reads

Conversations with civil contractors, MEP specialists and developers closer to the demand signal than headline output data.

SECONDARY ANCHORS

→ Statistical authorities

Department of Statistics Malaysia, CIDB, Bank Negara, IMF and World Bank — cited inline by named source.

→ Listed-contractor filings

Annual reports, quarterly results and order-book disclosures of named players — cited inline by company plus period.

→ Triangulated estimates

Where no single source covers a figure, we combine two to three inputs and disclose the method. Tagged [Kira estimates].

Malaysia's construction market — 2026 inflection

A market that grew double-digit in 2025 normalises in 2026, but a structural **data-centre and SEZ build-out** re-anchors demand toward high-value non-residential and civil work.

MARKET SIZE 2026

70.4 MYR bn

<33 %

fragmented field

KIRA EST.

JS-SEZ COMMITTED INV.

68 MYR bn

9M 2025 approvals

MIDA 2025

From cyclical highs to structural demand

Construction work done reached MYR 66.3 bn in 2025 after expanding **11.4% in real terms** [GlobalData 2026], the strongest print in a decade. 2026 normalises to roughly **6.1% growth toward MYR 70.4 bn** [GlobalData 2026] — but the composition is shifting. Non-residential work grew 18.6% YoY in Q4 2025 [DOSM 2025], led by industrial and data-centre builds.

Data centres and Johor anchor the cycle

Hyperscaler commitments now exceed **USD 12 bn** across AWS, Microsoft and Google [Kira estimates], with Johor's pipeline at ~4.0 GW of power capacity, 700 MW already under construction [JLL 2025]. The Johor-Singapore SEZ drew **MYR 68 bn** of approved investment in 9M 2025 [MIDA 2025], converting cross-border ambition into civil and shell-and-core workloads.

SOURCE KEY · GlobalData 2026 = GlobalData Malaysia Construction Industry Report 2026 · DOSM 2025 = Department of Statistics Malaysia, quarterly construction statistics · MIDA 2025 = Malaysian Investment Development Authority / Invest Johor 9M-2025 approvals · JLL 2025 = JLL Malaysia data-centre tracker Nov 2025 · Kira estimates = KIRA in-house analyst triangulation

Five strategic implications

Where market participants should concentrate capital, capability and risk attention over the 2026–2028 window.

IMP 01 Bid the data-centre shell-and-core wave Four Selangor data-centre packages worth a combined MYR 10 bn [The Edge 2025] plus Johor hyperscale shells form the fastest-filling tender book. Contractors with MEP and fast-track delivery credentials win disproportionately. MYR 10 bn Selangor DC tenders	IMP 02 Anchor to the 13MP infrastructure spine The 13th Malaysia Plan allocates MYR 430 bn of development expenditure for 2026–30 [EPU 2025], with rail, road and grid the highest-velocity segment at ~9.9% CAGR [Kira estimates]. This shelters civil order books from residential swings. MYR 430 bn 13MP DE pool	IMP 03 Industrialise to beat the labour gap CIDB flags a ~180,000-worker skilled-trade shortfall through 2028 [CIDB 2025]. The 70% IBS public-project mandate makes prefabrication 15–20% cheaper on labour and ~20% faster [Kira estimates] — a margin and schedule edge, not a compliance cost. 180k worker shortfall	IMP 04 Price the power and water constraint Johor’s planned ~5,800 MW of data-centre capacity strains a gas-heavy grid [JLL 2025]; new sustainable-DC guidelines push PUE/WUE limits and reclaimed-water use [MITI 2024]. Power-ready land and on-site utilities become the binding scarce input. ~5,800 MW Johor DC plan	IMP 05 Position for consolidation The proposed Sunway-IJM combination would create a ~USD 3 bn revenue group overtaking Gamuda [Fortune 2026]. Mid-tier specialists should choose between scale partnerships or defensible niches in MEP, facade and retrofit. USD 3 bn merged revenue

SECTION 04

Macro context: Malaysia 2026

A **5.2% 2025 print** normalising to ~4.7% in 2026 sits on top of the largest development-expenditure pool in any Malaysia Plan — fiscal tailwind meets a private investment surge.

GDP & INFLATION

BUDGET 2026

13MP PIPELINE

Macro indicators driving demand

A resilient, low-inflation expansion gives developers and the state room to commit multi-year capital — the precondition for a long construction cycle.

Growth normalises, not stalls

Malaysia grew **5.2% in 2025** [World Bank 2025]; the IMF lifted its 2026 forecast to **4.7%** [IMF 2026]. Inflation averaged just 1.4% over Jan–Oct 2025 [IMF 2026], keeping financing conditions supportive for construction-heavy investment.

Fiscal capacity holds

Budget 2026 sets record expenditure of **MYR 419.2 bn** while narrowing the deficit to 3.5% of GDP [UOB 2025]. Discipline plus a development pool keeps public works credible — a contrast to stop-go infrastructure cycles elsewhere in the region.

Investment, not consumption, leads

The growth mix is tilting to fixed investment — manufacturing, data centres and the SEZ — which is construction-intensive per ringgit of GDP [Kira estimates].

Real GDP growth trajectory

% YOY

2023–2026, LOW-INFLATION BACKDROP

Real GDP growth, % – inflation held ~1.4%

World Bank 2025 • IMF 2026

SOURCE KEY • World Bank 2025 = World Bank Malaysia Economic Monitor 2025 • IMF 2026 = IMF Article IV Consultation Malaysia, Feb 2026 • UOB 2025 = UOB Global Economics & Markets Research, Budget 2026 note • Kira estimates = KIRA in-house analyst triangulation

The policy pipeline behind the cycle

Three overlapping commitments — the 13MP, Budget 2026 and the SEZ — convert into a visible multi-year workload for contractors.

13MP: the spine

The 13th Malaysia Plan allocates **MYR 430 bn** of development expenditure for 2026–30, the highest of any Malaysia Plan at ~MYR 86 bn per year, with the economic sector taking 52.8% [EPU 2025]. Rail, road, public transport and grid dominate.

Mega-projects anchor visibility

The East Coast Rail Link is ~89% complete, the Penang LRT Mutiara Line (USD 2.9–3.8 bn) and Pan Borneo Sabah upgrade extend long-cycle civil work [GlobalData 2026]. The Gemas–Johor Bahru double-track opened December 2025 [Invest Johor 2025].

Private capital amplifies

Atop public spend, the Works Ministry guided ~**MYR 200 bn** of 2025 construction activity [GlobalData 2026], lifted by data centres and SEZ industrial builds.

Committed capital pools

SECTION 05

Sector overview & sizing

At **MYR 70.4 bn** in 2026 the market is large but unevenly distributed — residential still leads on share, yet non-residential and civil carry the growth.

MARKET SIZE

SEGMENT SPLIT

GROWTH VELOCITY

Market size & growth: construction Malaysia

A **MYR 70.4 bn** market in 2026 [GlobalData 2026], compounding at ~6% as the post-2025 surge cools but the base resets higher.

Headline trajectory

Work done rose from MYR 58.8 bn (2024) to **MYR 66.3 bn (2025)** [DOSM 2025], with 2026 guided to MYR 70.4 bn [GlobalData 2026]. The five-year 2021-25 CAGR of 10.5% [GlobalData 2026] reflects post-pandemic catch-up plus the industrial and DC wave.

Composition is the story

Residential held **44.3% of value in 2025** [GlobalData 2026], but non-residential grew 18.6% YoY in Q4 [DOSM 2025], compressing residential’s relative weight as industrial and DC shells scale.

Beyond 2026

Post-2026 the market is modelled to average ~3.5-4.8% annual growth to 2030, reaching roughly MYR 90 bn [GlobalData 2026].

Market size by segment

MYR BN

STACKED OUTPUT, 2024-2026

Res • Non-res • Civil • Special trades

GlobalData 2026 • DOSM 2025

SOURCE KEY • GlobalData 2026 = GlobalData Malaysia Construction Industry Report 2026 • DOSM 2025 = Department of Statistics Malaysia, quarterly construction work done

Segment economics: where the value sits

Share and growth diverge sharply — the segments gaining value density are precisely those tied to data centres, the SEZ and the 13MP spine.

SEG 01 · Non-residential

Fastest-value segment

Industrial factories, data-centre shells and SEZ commercial space drive this segment. Per-MW DC construction runs **USD 8-10 m** [Arizton 2026], lifting non-residential value density well above housing.

+18.6% YOY Q4-25 [DOSM 2025]

SEG 02 · Civil engineering

Highest-velocity infrastructure

Rail, highway, grid and the RTS Link feed a long-cycle book sheltered from residential swings. The 13MP’s MYR 430 bn DE pool [EPU 2025] underwrites multi-year visibility.

~9.9% CAGR [KIRA ESTIMATES]

SEG 03 · Residential

Largest by share, moderating

Affordable-housing programmes (~150,000 planned units) and private launches sustain volume, but urban affordability caps premium expansion. Growth normalises below the headline market rate.

44.3% SHARE, ~7.5% CAGR [GLOBALDATA 2026]

SEG 04 · Special trades & MEP

Margin-rich niche

Mechanical, electrical, plumbing and facade work — disproportionately demanded by data centres and high-spec industrial. Specialists with retrofit divisions capture an outsized slice of incremental value.

15–20% LABOUR SAVING VIA IBS [KIRA ESTIMATES]

READ-ACROSS

Value is rotating from volume to spec

The market’s growth is concentrating in **non-residential and civil** work with higher MEP intensity. Contractors weighted to plain residential volume face the slowest lane; those with industrial, DC and infrastructure capability sit in the fast one. [Kira estimates]

STRATEGY ANCHOR FOR SECTIONS 07–08

FOOTPRINT

Regional

POSITION

Gamuda runs a **record MYR 36.6 bn order book** [Gamuda 2025], built on tunnelling, rail and water civil works, and is now the most credible local bidder for mega data-centre packages.

DATA-CENTRE PIVOT

Through Gamuda DC Infrastructure it expanded with Google in Port Dickson (~USD 236 m) [DCD 2025] and is a top contender for the MYR 10 bn Selangor DC tenders [Maybank IB 2025].

STRATEGIC IMPLICATIONS

- **Scale advantage** — only contractor able to self-deliver civil + DC infra at hyperscale.
- Overseas book diversifies away from domestic cyclicalit.
- MEP and fit-out capability (RM929 m Pearl Computing win) deepens DC credentials.
- Key risk: power-ready land and grid timing in Johor.

Sunway Construction Group

Contractor set to become Malaysia’s largest via the IJM combination

#2 → #1

JOHOR DC

MERGER

ORDER BOOK

6.4 MYR bn

MERGED REV.

~3.0 USD bn

DC WINS

Johor

STATUS

In play

POSITION

Suncon carries a **MYR 6.4 bn outstanding order book** [The Edge 2025] and won an RM570 m Johor data-centre core-and-shell package from a US hyperscaler [The Edge 2025].

MERGER UPSIDE

The proposed Sunway-IJM tie-up (~USD 2.7 bn) would lift combined 2024 revenue to ~USD 3 bn, overtaking Gamuda and creating Malaysia’s largest construction group [Fortune 2026].

STRATEGIC IMPLICATIONS

- Merger creates a national champion with property + contracting scale.
- Johor DC wins position it for the Singapore-adjacent pipeline.
- Integration risk: aligning two large property-and-build cultures.
- Watch anti-trust and minority-shareholder approvals.

IJM Corporation

Contractor-concessionaire leaning into fast-track industrial and DC builds

#3

CONCESSIONS

TARGET

2024 REV.

1.3 USD bn

RECENT WIN

NPE2

EXPOSURE

Civil + toll

STATUS

Bid target

POSITION

IJM blends contracting with concession assets and has **leaned into fast-track industrial and data-centre awards since 2024** [Fortune 2026], accepting the NPE2 design-and-build award in November 2025 [Kenanga 2026].

MERGER CONTEXT

As the Sunway acquisition target, IJM’s standalone trajectory is now framed by the combination; its DC and logistics workload is a core rationale for the deal [Fortune 2026].

STRATEGIC IMPLICATIONS

- Concession cash flows cushion contracting cyclicality.
- Fast-track DC and logistics capability is the strategic prize.
- A top-three bidder for the MYR 10 bn Selangor DC packages [Maybank IB 2025].
- Deal completion reshapes the entire top tier.

SECTION 08

Demand drivers: data centres & SEZ

Two engines pull the cycle: a **~4 GW Johor data-centre pipeline** and a Johor-Singapore SEZ that drew MYR 68 bn of approved investment in nine months.

[DC PIPELINE](#)[JS-SEZ](#)[RTS LINK](#)

The data-centre and JS-SEZ build-out

Johor has become Southeast Asia’s fastest-growing hyperscale corridor — and the single largest swing factor for non-residential and civil contractors through 2028.

A ~4 GW pipeline next door to Singapore

Johor’s data-centre pipeline reached **~4.0 GW of power capacity** by Nov 2025, with 700 MW under construction and 3.3 GW planned [JLL 2025]. The state has ~50 data centres operational or in application/construction [Invest Johor 2025]. At **USD 8-10 m per MW** of construction [Arizton 2026], the build value is substantial.

Hyperscaler capital commits

AWS (USD 6 bn), Microsoft (Southeast Asia 3 region, USD 2.2 bn) and Google (USD 2 bn+) underwrite the demand [DCD 2025]. National data-centre market value is set to climb from USD 6.1 bn (2025) toward USD 11.4 bn by 2031 [Arizton 2026].

SEZ multiplies the workload

The Johor-Singapore SEZ drew **MYR 68 bn** of approved investment in 9M 2025 — 74.6% of Johor’s total — with Singapore the largest investor [MIDA 2025]. The RTS Link (Dec 2026) and Gemas-JB double-track add cross-border civil work.

Regulatory & policy landscape

Two regimes shape contractor economics: a long-standing **industrialised-building mandate** and a fast-evolving **sustainable data-centre** rulebook.

IBS mandate: cost lever, not just compliance

Since Treasury Circular SPP 07/2008, public projects above RM10 m must hit a **70 IBS score**; private projects above RM50 m must hit 50 [CIDB 2025]. Against a ~180,000-worker skilled-trade shortfall through 2028 [CIDB 2025], prefabrication is ~15–20% cheaper on labour and ~20% faster [Kira estimates].

Green data-centre guidelines

MITI’s Guideline for Sustainable Development of Data Centre sets **PUE, WUE and CUE** targets [MITI 2024]. The water regulator is pushing reclaimed, rain and recycled water toward zero potable-water reliance within three years [ISEAS 2025].

Net effect

Compliance favours contractors with IBS capacity and DC-grade MEP/utility skills — raising barriers for undercapitalised players. [Kira estimates]

Policy timeline

2008–2026

REGULATORY ACTIONS SHAPING BUILD ECONOMICS

- 2008 • **SPP 07/2008**

SECTION 10

AI impact on construction

AI is not yet re-pricing build costs — but in design optimisation, schedule control and the **data-centre demand loop itself**, it is already shaping where Malaysian contractors win.

DESIGN & BIM

DELIVERY CONTROL

THE DC DEMAND LOOP

AI in Malaysia construction: sizing & use cases

Adoption is early and uneven, but the **data-centre demand loop** ties AI directly to the sector’s biggest growth driver.

Early, pilot-stage adoption

Most Malaysian contractors are **piloting rather than scaling** AI [Kira estimates] — clustered in BIM clash-detection, quantity take-off and programme risk analytics.

The demand loop

AI compute is the reason the DC pipeline exists. GPU imports hit **USD 6.45 bn** in the first four months of 2025 [Kira estimates], directly feeding hyperscale build demand.

Where value lands

Near-term gains are in schedule and cost control on complex DC and industrial builds, not in displacing site labour.

AI adoption stage

% OF FIRMS

5-year outlook & forecast to 2030

After the 2025 surge, the base case is steady mid-single-digit growth to **~MYR 90 bn by 2030** [GlobalData 2026], with data centres and the SEZ the key swing factors.

BASE

~MYR 90 bn by 2030

Mid-single-digit growth (~3.5–4.8% CAGR) as the DC pipeline converts and 13MP civil work delivers steadily. [GlobalData 2026]

BULL

Faster DC + SEZ conversion

Accelerated Johor power roll-out and full SEZ pipeline could push output meaningfully above base, led by non-residential. [Kira estimates]

BEAR

Power, water & labour bind

Grid constraints, water rules and the ~180k labour gap could delay DC builds and trim civil throughput. [CIDB 2025]

SOURCE KEY • GlobalData 2026 = GlobalData Malaysia Construction Industry Report 2026 • DOSM 2025 = Department of Statistics Malaysia • CIDB 2025 = Construction Industry Development Board • Kira estimates = KIRA analyst triangulation

Methodology endnote & source mix

This view triangulates two evidence streams. Where a figure carries a named tag (e.g. [GlobalData 2026], [MIDA 2025]), the data comes from that source; the full citation is below. Where a figure carries [Kira estimates], KIRA analysts derived it from a blend of disclosed inputs. Approximately **35% of quantitative claims are KIRA-derived**; ~65% are externally cited.
